

VacuEasylift VM160 framed windows

Lifting framed windows in building industry

Lifting windows at building constructional company. This is a standard vacuum lifting application, vertical to horizontal using a VM160 with angle adapter 10810 and handle for adapter 10811 and a suctionfoot 10600.

The suction foot is turned 90 degrees with the handle and attached to the side of the vertically placed window, gravity turns the window to horizontal position.

The complete working area is served by a Lyftman LR-System LR170/120 combination. The crane system has been lowered approx 2 metres to reach a suitable suspension point for the VacuEasylift.
