

VacuEasylift VM160 4644 roll lifter

Project number: 4644
Project supervisor: Simon Coles, TAWI UK Ltd
Project engineer: Mikael Kayser TAWI AB Sweden

Lifting steel tubes of different lengths, max 3 m, that weigh about 40 kg. A low head room system was used to maximise the lifting height. The tubes are moved around the workshop and placed into a wooden crate that is 1 m deep. To be able to lower the tubes with ease the extendable handle is used (project nr 4643) which can be adjusted to suitable length.
